

WESTERN PACIFIC
REGIONAL BRANCH

Resource Management and Well Intervention

Joint WPRB/NZGA Technical Seminar
Taupo, August 2008

Full course material now available in digital format

The Philippines has a huge amount of knowledge about geothermal reservoir management. They have an installed geothermal capacity of over 2000 MW, more than five times as large as New Zealand. They have seven large projects operating, more than in any other country, some for in excess of 30 years. This is a rare opportunity to tap into their expertise.

Cedric Malate has a lifetime of experience in geothermal reservoir management and is intimately familiar with the history of geothermal development in the Philippines. He presents the course with New Zealand case studies discussed by Malcolm Grant and Allan Clothworthy.

This CD contains the full lecture notes, presentations and extra papers presented at the 2008 seminar in Taupo, New Zealand.

Cost:
US\$50.00 for IGA members
US\$60.00 for non-members
