

Cost Reduction Through Improved Geothermal Well Targeting

Joint WPRB/INAGA Technical Seminar
Nusa Dua, 26-28 April 2008

Full course material now available in digital format

A vast amount of research and technical development has been carried out in geothermal science in the past 50 years. This course brings together some of this information with the objective of cost reduction for geothermal development in Indonesia, concentrating on using conceptual models and geophysical techniques to target wells.

This CD contains the full lecture notes, presentations and extra papers presented at the 2008 conference in Nusa Dua.

Cost:
US\$50.00 for IGA members
US\$60.00 for non-members
